

Final exam

Ans1 The resume is Anyone looking for a job needs a resume including web developers and web designers. However, anyone related to design must put superior efforts to make their resumes more attractive so it reflects their specific abilities (eg.: layout and typography rules and techniques). A well produced resume will tell the reader you're a professional. So, a resume composed in Arial 24pts purple in MsWord has very little chance to reach its goals.

Ans2 A portfolio is simply what invested assets you're holding in total, and how they're divided. Think of your holdings as a banana cream pie — or whichever objectively inferior pie you prefer. This pie is divided into different sized slices that coincide with your various holdings — be they stocks, bonds, mutual funds, ETFs or liquid cash equivalents.

Ans3 resume Nowadays a lot of jobs are available and unfortunately, there are lots of applicant for a single job position. So [how do you screen](#) those few candidates who will be fit for the job? The answer is with the help of an effective resume.

Unlike a curriculum vitae which is too long to be readily skimmable, a resume allows a recruiter to go through the candidate's information and make a screening process to select the right candidate in the shortest time possible.

Resume, being in precise format, help to fast forward the recruitment process. But generally, a resume stands to serve following solution.

Portfolio A **resume serves a great purpose** when it comes to providing a general impression **about your life and your current work experiences**. But what if someone really wants to assess your work in real-time.

In other words, how does your work really looks and feels like and how good it is in terms of efficiency and achieving the desired outcomes. Or if, someone wants to learn more in-depth about your work in action how it is implemented and how does it affect in real-world situation outcome.

Final exam

Ans4 Things not to put on your resume

- Too much information.
- A solid wall of text.
- Spelling mistakes and grammatical errors.
- Inaccuracies about your qualifications or experience.
- Unnecessary personal information.
- Your age.
- Negative comments about a former employer.
- Details about your hobbies and interests.
-

Ans5 the name of the project is portfolio

Functions of portfolio

- Economic feasibility.

Ans7 Yes my final project is full stack project

Ans8 AJAX is a developer's dream, because you can:

- Read data from a web server - after a web page has loaded
- Update a web page without reloading the page
- Send data to a web server - in the background

Ans9 A REST API (also known as RESTful API) is an application programming interface (API or web API) that conforms to the constraints of REST architectural style

Final exam

and allows for interaction with RESTful web services. REST stands for representational state transfer and was created by computer scientist Roy Fielding.

An API is a set of definitions and protocols for building and integrating application software. It's sometimes referred to as a contract between an information provider and an information user—establishing the content required from the consumer (the call) and the content required by the producer (the response).

Ans10Get-service: Checking the Status of Windows Services with PowerShell **Services in Windows are one of the most important parts of the operating system. Previously, to get the status of a service on Windows, you had to use the services.msc graphical snap-in or the sc.exe command-line tool (for example, sc.exe query wuauserv). In this article, we'll take a look at how to check the status of a service on Windows using PowerShell.**
